

Elements Game

Elements: The discovery of the `Alchemy Treatise` by Leonardo Da Vinci provides an incomplete formula for creating the Elixir of Life. Follow the clues left by Da Vinci`s assistant on a scientific swap-and-match adventure using the four elements: Water, Earth, Fire, Air and an unknown fifth element. Swap elemental gems to make matches of the same type and size to merge and distill each element. As you distill each element, the energy created unlocks new combinations of gems using the five elements. If you succeed in unlocking all 15 elements, you will discover the Elixir of Life. Love it? go and start playing Elements now.
